

Build a complete production-ready PHP + MySQL CMS called "SmartTV CMS" and deliver the final output as a ready-to-use ZIP archive containing all source code, assets, SQL installer, documentation, installer, admin panel, frontend, backend, APIs, and all required functionality.

The goal is to create a commercial-grade Smart TV-style Live TV platform that behaves like a real television and is suitable for production use.

This must NOT be a demo project.

This must be a fully functional CMS that can be uploaded directly to shared hosting and installed through a web-based installation wizard.

Use:

- PHP 8+
- MySQL
- HTML5
- CSS3
- Bootstrap 5
- Vanilla JavaScript
- AJAX
- HLS.js

Do NOT use Laravel, CodeIgniter, Symfony, or any heavy framework.

Write clean modular object-oriented PHP.

Use secure coding practices.

Use MVC-style architecture internally.

Optimize for:

- Shared Hosting
- Desktop
- Mobile
- Tablet
- Android TV
- Google TV
- Smart TVs

The entire system must be responsive and fully functional.

Do not generate placeholders.

Do not generate pseudo code.

Generate actual working code.

Create a professional installer.

On first launch automatically redirect to installation.

Step 1:

Check:

- PHP version
- Required PHP extensions
- Folder permissions
- Server compatibility

Step 2:

Database configuration:

- Host
- Database name
- Username
- Password

Test connection before proceeding.

Step 3:

Administrator account creation:

- Name
- Email
- Username
- Password

Step 4:

Automatically:

- Create all database tables
- Create configuration files
- Create .htaccess
- Save settings
- Create administrator account
- Complete installation

After installation:

- Lock installer
- Prevent reinstallation
- Allow manual reset only

The website must behave like a real television.

Implement:

- Channel Up
- Channel Down
- Previous Channel Recall
- Favorite Channels
- Recently Watched
- Continue Watching
- Last Viewed Channel
- Channel History

Support direct channel number entry.

Example:

Typing:

1

10

101

Shows TV-style numeric overlay.

Automatically switches to Channel 101 after a few seconds.

This is a mandatory requirement.

Channel switching must NEVER reload the page.

Requirements:

- AJAX navigation
- JavaScript History API
- Dynamic URL updates
- Instant channel switching
- Browser Back support
- Browser Forward support

- No white flash
- No refresh
- No player interruption

Example:

/channel/101

/channel/102

URL changes instantly without page refresh.

The experience must feel exactly like a real television.

Support:

- Keyboard
- Android TV Remote
- Google TV Remote
- Smart TV Remote

Keys:

Up = Next Channel

Down = Previous Channel

Left = Volume Down

Right = Volume Up

Enter = Open Channel List

Backspace = Previous Channel

0-9 = Numeric Channel Entry

Navigation must work perfectly without a mouse.

Create a focus management system.

Requirements:

- Directional navigation

- Focus animations
- TV-friendly controls
- Remote-friendly interface
- Android TV compatibility
- Samsung TV style navigation
- LG WebOS style navigation

When switching channels show:

- Channel Number
- Channel Name
- Channel Logo
- HD/FHD Badge

Auto-hide after a few seconds.

The player must be extremely stable.

Use HLS.js.

Features:

- m3u8 playback
- Autoplay
- Fullscreen
- Picture-in-Picture
- Volume Control
- Auto Quality
- Manual Quality Selection
- Buffer Indicator
- Auto Reconnect
- Backup Streams
- Failover System
- Subtitle Support
- Audio Track Support
- DVR Support
- Live Stream Support
- Latency Monitoring

Properly destroy HLS instances before loading new channels.

Prevent:

- Memory leaks

- Duplicate players
- Multiple stream loading
- Playback freezes

Support:

- Fast channel switching
- Stream recovery
- Buffer recovery
- Error recovery

Preserve:

- Volume
- Fullscreen state when possible
- Player preferences

Unlimited channels.

Each channel contains:

- Channel Number
- Channel Name
- Slug
- Logo
- Cover Image
- Category
- Country
- Description
- Main Stream URL
- Multiple Backup Streams
- HD/FHD Badge
- Featured Status

Support:

- Drag & Drop Sorting
- Bulk Import
- Bulk Export
- CSV Import
- JSON Import
- Clone Channel
- Channel Tags
- Channel Groups

Support:

- XMLTV Import
- Automatic Updates

AJAX live search.

Search:

- Channel Number
- Channel Name
- Category
- Country
- Tags

Registration and login.

Features:

- User Profiles
- Avatar
- Favorites
- Watch History
- Continue Watching
- Password Reset
- Remember Me
- Login History
- Device Management
- Security Settings

Create a professional ad platform.

Support:

- Header Ads
- popunder ads

Admin Controls:

- Scheduling
- Expiration

Admin can manage:

- Site Title
- Logo
- Favicon
- Colors
- Backgrounds
- Dark Mode
- Light Mode
- TV Theme Settings

Dashboard must show:

- Online Users
- Total Users
- Total Channels
- Most Watched Channels
- Concurrent Viewers
- Watch Time

Monitor all streams.

Show:

- Online
- Offline
- Response Time
- Last Check Time

Automatically switch to backup streams.

Protect stream URLs.

Requirements:

- Hidden Stream URLs
- Temporary Tokens
- Anti-Hotlink

- Access Control

Implement:

- SQL Injection Protection

- IP Blocking
- Audit Logging

Create a professional AJAX-powered admin dashboard.

Modules:

Dashboard

Channels

Categories

Users

Analytics

Themes

Pages

Menus

Settings

Logs

Stream Monitor

Administrators

Roles & Permissions

Global Search

Activity Logs

Audit Logs

Error Logs

Automatically generate:

- Sitemap.xml
- Robots.txt

Implement:

- Channel Recall
- Channel Information Banner
- Sleep Timer
- Channel Lock
- Startup Channel
- Favorite Channel Groups
- TV-style Animations
- TV-style Focus Effects
- Picture in Picture
- Auto Play Last Channel
- Persistent Volume
- Persistent History
- Recently Watched
- Continue Watching

Modern premium Smart TV design.

Requirements:

- Dark Mode Default
- Glassmorphism Effects
- Fast Animations
- Professional UI
- TV Friendly Layout
- Large Controls
- Remote Friendly Design
- Smooth Transitions

Every module must be connected and fully functional.

Deliver the final result as a complete production-ready ZIP archive that can be uploaded directly to shared hosting and installed immediately using the installation wizard.
